

Luqman Muhammed Kunju

London, UK | +44 7503430907 | luqmanmuhammed007@duck.com | [LinkedIn](#) | [GitHub](#)

2nd-year Computer Science student at Queen Mary University of London (78% Year 1 — on track for First Class Honours). Interested in solving real business problems through data — from building an RFM segmentation pipeline across 4,000+ customer records to analysing a full Formula 1 season lap by lap. Driven by the process of turning messy, complex data into actionable decisions. Seeking a Summer 2026 analyst internship.

EDUCATION

BSc Computer Science (2nd Year)

Sep 2024 – Present

Queen Mary University of London

Year 1 Average: 78% — on track for First Class Honours | Relevant modules: Database Systems (SQL), Software Engineering (UML, System Design), Software Engineering Project (Requirements Elicitation, Domain Analysis), GUI (Data Gathering, User Research)

EXPERIENCE

Digital Marketing & Analyst Intern | Grain N Grace Private Ltd

Jul 2025 – Sep 2025 | Kerala, India

- Identified 20% budget overspend across Meta and Google Ads; diagnosed inefficiency channel by channel and delivered a reallocation recommendation that directly influenced budget decisions.
- Monitored daily campaign performance across CTR, CPC, and conversion metrics; applied targeted adjustments to improve efficiency throughout the internship.
- Analysed Google Analytics 4 data to separate high-performing organic content from underperforming pages; findings fed directly into content and promotion strategy.
- Produced weekly Excel reports translating cross-channel KPIs into clear summaries and actionable recommendations for non-technical stakeholders.

Student Demonstrator (Part-time) | Queen Mary University of London

Oct 2025 – Present | London, UK

- Delivered lab sessions for 30–40 students across two CS modules, breaking down complex technical problems into structured, accessible solutions.
- Assessed lab submissions and provided structured feedback evaluating problem-solving approaches and identifying areas for improvement.
- Collaborated with academic staff to maintain productive lab environments; trusted to run sessions independently across both modules.

PROJECTS

F1 2024 Performance Analytics [🔧] | Python (FastF1)

- Engineered a full EDA pipeline across all 24 rounds of the 2024 F1 season, ingesting lap-by-lap timing, qualifying, and race data using FastF1.
- Built a Qualifying Consistency Score ranking every driver across average position, variance, and gap to pole — top 6 by score matched top 6 in the championship.
- Cleaned 1,129 laps to 1,034 usable records, removing pit laps and out laps; applied median lap times to neutralise safety car distortion across tyre compounds.
- Modelled constructor points as cumulative totals, pinpointing McLaren's overtake of Ferrari at Round 13 and Red Bull at Round 15.

Customer Segmentation & RFM Analysis [🔧] | PostgreSQL, Python, DBEaver

- Engineered an end-to-end RFM pipeline across 4,000+ customer records using SQL NTILE (5) window functions to score recency, frequency, and monetary value.
- Segmented customers into five commercial groups — Champions drove 45% of revenue while At Risk represented 8% churn exposure requiring immediate action.
- Pinpointed 53% of At-Risk customers concentrated in a \$3,017–\$3,943 spend band, quantifying revenue at risk and enabling targeted retention decisions.
- Produced four Matplotlib visualisations mapping revenue concentration, recency–spend relationships, and cohort breakdowns to support stakeholder presentation.

Sales Performance Analysis — Global Superstore [🔧] | Power BI, DAX, Power Query

- Developed a multi-table Power BI data model across 50,000+ rows using Power Query and DAX, enabling analysis by segment, region, and category.
- Diagnosed Tables sub-category as a structural loss-maker at -8% margin on non-discounted orders, distinguishing a unit economics failure from a discounting issue.

- Surfaced Consumer segment generating 49.8% of sales but 51.1% of profit, confirming structurally superior margins and justifying prioritised retention spend.
- Uncovered consistent 87% Q4 revenue uplift across the dataset; recommended forward capacity planning across inventory, logistics, and staffing.

Marketing Performance & Channel Efficiency Analysis [↗] | Power Query, Excel, Tableau

- Cleaned multi-channel dataset resolving nulls, negative spend, and inconsistent dates; engineered CPA, CPC, CTR, and CVR metrics from raw fields.
- Built an Efficiency Index across \$5.36M spend — identified Email (0.61) and Facebook (0.66) as underperforming, flagged Instagram (1.69) and TikTok (1.57) as scaling candidates.
- Quantified spend-to-conversion gaps via Pivot Tables, revealing Email consuming 30.8% of budget while returning only 18.7% of conversions.
- Delivered a Tableau dashboard with KPI cards and colour-coded efficiency deltas, enabling direct budget reallocation decisions across 335K conversions.

SKILLS

Analytics:	Customer Segmentation · RFM Analysis · KPI & Performance Analysis · ROI & Funnel Analysis · Stakeholder Reporting · Data Modelling · Data Cleaning & Transformation · Exploratory Data Analysis · Dashboard Design
Tools:	Power BI · Tableau · Excel (Pivot Tables, Power Query, Advanced Formulas) · Google Analytics 4 · Git / GitHub · Visual Paradigm · Meta Ads Manager · Google Ads
Technical:	SQL (JOINS, Subqueries, Window Functions, NTILE) · Python (pandas, NumPy, Matplotlib) · PostgreSQL / DBeaver · DAX Measures (Time Intelligence) · Power Query · Star Schema Modelling
